

Dear Friends,

First, we wish you and your families a Happy New Year and the very best for 2026 and after!

Our mission at AaaTeX has always been to provide high-quality applications, like the IIFImporter, at the most affordable price possible. We have worked hard to keep our pricing stable despite ever-increasing inflation. However, recent changes by Intuit have made this mission extremely difficult.

Since its inception in 2010, the QuickBooks Online API (the interface our apps use to update your data in QBO) was free for developers. As of late 2025, Intuit has replaced this with a paid "App Partner Program" that **charges us** both a monthly membership fee and metered fees **based on your usage**. This has added thousands of dollars to our costs.

To keep our prices low and manage these new expenses, we have optimized our IIFImporter to be more efficient and reduce the number of costly "calls" made to Intuit's servers. We have also added performance statistics to help us monitor and further reduce these fees. These are mostly built into the app itself.

#### **What does this mean to you:**

These critical changes are built into the IIFImporter software that runs on your system. To ensure everyone is using the most efficient version, **we will be requiring a mandatory update. In a few weeks, previous versions of the IIFImporter will not run.** There are many customers that have not updated for years. The update would bring the app's version/build number to a 1.3.95.0 or higher. The version number is on the app screen both on top and bottom once the app is fully up as a Build (Bld) or version number.

Top

Bottom

The update has been released. We appreciate your understanding and continued support as we adapt to these changes. Please update at your earliest convenience.

#### **Here is the update procedure:**

1. Uninstall the previous version via using Window's Add or remove programs and find IIFImporter and Uninstall it first.
2. Download and run from <https://AaaTeX.com/downloads/IIFImporter.msi>.
  - a. This requires .net 4.8.1. If it is not install on your system you can get it here: <https://dotnet.microsoft.com/en-us/download/dotnet-framework/thank-you/net481-offline-installer>

The running of the app didn't change.

**Please remember that we are doing this, so we do not have to raise prices.**

Best regards,

The AaTeX Team
